Plant Varieties with Notes

Cleome, Mixed

(Capparaceae, Cleome)

Light:	Full Sun	PlantingTime:	Spring
Moisture:	Average Moisture	Bloom Season:	Summer
Height:	3 feet	Begin Bloom:	June
Spacing:	12 inches	End Bloom:	October

Self Propagates -- many new plants from seed. Seeds germinate best when days are warm and nights are cool. Start indoors six to eight weeks before last frost or direct seed outside.

Notes this Variety

2002

Transplanted 'volunteers' did very nicely - but bloomed about a month after the seedlings that grew where they sprouted. This worked very nicely in extending the bloom period of this variety.
