Exercise: Habitat Questions

Purpose: Ecology is defined as the study of why plants and animals live where they do. By reviewing the observations you have made on your habitat, you will begin to learn about the *ecology* of this location.

1. Why do you think the plants you found in your habitat are growing in this location?
List 5 different *Plant Species* that you have identified . For each of the plant species, give reasons why that specie would be growing in your habitat.

- i. _____
- ii. _____
- iii. _____
- iv. _____
- v. _____

2. Why do you think the wildlife you spotted visited, or live in, this location?
Repeat what you did in question 1 for 5 different wildlife species.

- i. _____
- ii. _____
- iii. _____
- iv. _____
- v. _____

3. In this habitat, who are the

- i. Primary Consumers? _____

- ii. Secondary Consumers? _____

- iii. Tertiary Consumers? _____
