

Name: _____

Date: _____

Exercise: Reviewing the Data Entered into Habitat Tracker©

Purpose: Although storing data in an electronic database can help keep us organized, the real power of an electronic data management system is only achieved if we can access and use that data. Now that we have entered quite a bit of data into Habitat Tracker©, let's learn about the different ways we can access and publish that data.

1. Think back on all the plants and animals you identified while observing your habitat.
 - a. What was your favorite plant specie? _____
 - b. What was your favorite animal specie? _____

2. How would you view the data you entered for each of these species?
Plant: _____
Wildlife: _____

3. In Habitat Tracker©, print a Profile report for the plant and animal listed above.
4. What type of information is printed on each profile report? _____

5. For what other types of data can you print Profile reports in Habitat Tracker©?
